① PSE delivered electricity

The amount of electricity delivered from PSE during the billing period.

② Electricity returned to PSE

The amount of electricity returned to the PSE grid during the billing period.

③ Net electricity

The amount of energy that PSE charges you for equals the kilowatt-hours delivered by PSE minus the energy you returned to PSE during the billing period. If the amount is zero, then you returned more energy than you received.

④ Banked kWhs

If you produced more electricity than consumed, the excess kWhs will be added to your bank here. If you used more energy than you produced, any previously banked kWhs will automatically be withdrawn to reduce you Net Electricity charges.

Banked kWhs are reset to zero every March 31st. This allows net metering credit to offset some or all of your annual consumption. Net Metering is not designed to compensate customers for producing more than they use annually.

Your bill includes charges for electricity and/or natural gas, delivery services, general administration and overhead, metering, taxes, conservation expenses and other items.
